Turkmenistan Wind Power Energy Storage Project

Overview

How to assess wind energy resources in Turkmenistan?

To assess wind energy resources within Turkmenistan, wind speed values at different heights are used. Wind directions, repeatability, strength and speed were determined.

Which sector consumes the most electricity in Turkmenistan?

Electricity consumption by sector is the following: agriculture and forestry 31.8%, industry 36%, transport 2.6%, and residential 21%. Turkmenistan's energy market is controlled by the State. Primary energy shares (in 2008) consisted of 72.4% gas and 27.6% oil. Most of the population receives natural gas and electricity for free.

Why is Turkmenistan a poor country?

The distribution system also suffers from severe power loss. Demand for renewable energy sources in Turkmenistan is practically inexistent. Turkmenistan has relatively low potential for bio energies, hydro power, and geothermal energy.

What is the electrification rate in Turkmenistan?

The electrification rate in Turkmenistan is 99.6%. Electricity is mostly produced in 8 thermal power plants with an installed capacity of 3.3 GW. Electricity consumption by sector is the following: agriculture and forestry 31.8%, industry 36%, transport 2.6%, and residential 21%. Turkmenistan's energy market is controlled by the State.

How will Turkmenistan transition to a digital system?

The support for this process is directed by the Decree of the President of Turkmenistan adopted in 2020, which approved the "Program for the Transition of the Sphere of Science in Turkmenistan to a Digital System for 2020–2025", highlighting the tasks of ensuring the integrity of academic

science, higher education and production.

Turkmenistan Wind Power Energy Storage Project

Turkmenistan grid-side energy storage project

Does Turkmenistan have a power grid? The project will cover four of the five regions of Turkmenistan, and will help establish an interconnected national transmission grid to improve ...

Get Started

Turkmenistan - Asia Wind Energy Association

Turkmenistan has relatively low potential for bio energies, hydro power, and geothermal energy. While it does have tremendous wind and solar power with 300 sunny days per year (equaling ...
