Türkiye Izmir photovoltaic bifacial module attack

Overview

Where is smart solar technology building a vertically integrated solar module factory?

Smart Solar Technology has secured Turkish government support to build a vertically integrated solar module factory in Izmir, Turkey. Image: PublicDomainPictures, Pixabay.

How much does a PV system cost in Türkiye?

In summer 2023, a new 10-year feed-in tariff (FIT) of TRY 1.06 (\$0.03)/kWh was introduced for PV systems installed between July 1, 2021, and Dec. 31, 2030. Projects that use PV modules made in Türkiye get even more support, benefiting from a further five-year FIT of TRY 0.288/kWh.

Where is Europe's largest vertically integrated solar module manufacturer based?

Photo: pv magazine/Matthew Lynas Europe's largest vertically integrated module manufacturer is based in Türkiye. The continent's largest solar array, the 1.35 GW Kalyon Karapinar PV power plant, is also found there. This did not happen by accident. It's a pivotal time for solar in Türkiye.

Will Astronergy start production in Türkiye?

An Astronergy spokesperson said Türkiye "is a place with a lot of potential in solar energy, therefore, Astronergy's high quality PV modules will start production in the Turkish market. This will be the first direct investment [in the country from a] top six, tier-1 PV module maker." What next?

Will the US be able to make Turkish solar panels?

The company said its plan was to produce 500 MW of gallium-doped monocrystalline passivated emitter, rear contact silicon panels and tunnel

oxide passivated contact (TOPCon) panels in 2023, before expanding to 1 GW in 2024. It's clear that the United States has potential for Turkish module manufacturers.

How much does a Turkish Solar System cost?

The Turkish authorities have set a 10-year feed-in tariff (FIT) of TRY 1.06 (\$0.0545)/kWh for PV systems that are installed between July 1, 2021, and December 31, 2030. Solar projects with Turkish PV components will be given an additional five-year tariff of TRY 0.2880/kWh.
