Uninterruptible Power Supply System Design for Banjul

Overview

What is an uninterruptible power supply?

An uninterruptible power supply is a device that has the ability to convert and control direct current (DC) energy to alternating current (AC) energy . UPS is a battery backup for PC, when the power goes off the UPS kicks in and continues to supply power for some period of time to the particular system.

Do I need an uninterruptible power supply (UPS)?

If the load calls for a particularly close-tolerance supply, or is intended for 24-hour daily use there is no alternative but to install a form of Uninterruptible Power Supply (UPS) to provide it with continuous, processed, clean power.

Why is a new concept important for an uninterruptible power supply?

In many applications, it is important for the supply voltage to be continuously available no matter what the circumstances. This isn't always easy to ensure. A new concept can provide an optimal solution for an uninterruptible power supply with an extremely compact design.

Can uninterruptible power supplies be used as a hybrid storage system?

Uninterruptible Power Supplies with hybrid storage system Uninterruptible power supplies with batteries as storage source provides good performance during grid interruption and blackout by supplying instant backup energy. However batteries cannot provide backup for a very long period of time and have limited charge/discharge cycles.

What is a dynamic uninterruptible power supply (Dups)?

For larger power units, Dynamic uninterruptible power supply (DUPS) are sometimes used, a synchronous motor/alternator is connected on the mains via a choke. Energy is stored in a flywheel, when the mains supply fails; an eddy-current regulation maintains the power on the load as long as the flywheels energy is not exhausted.

What is a voltage source UPS?

The current source however is used for very high power consumption devices hence this design is a voltage source UPS. Amongst others here is the single tracked and dual-tract UPS. The single-tract UPS feeds the load continuously from the rectified supply directly.

Uninterruptible Power Supply System Design for Banjul

Uninterruptible Power Supply System

Oct 24, 2014 · Businesses today invest large sums of money in their IT infrastructure, as well as the power required to keep it functioning. Uninterruptible power supplies (UPS) are an ...
