Upstream and downstream of energy storage batteries

Overview

What is the upstream and midstream stage of a battery?

The upstream stage in batteries involves the extraction of key raw materials such as lithium, cobalt, nickel and graphite. In the midstream stage, mined raw materials are refined and processed to create active cathodes and anodes—the positive and negative electrodes for a battery, respectively—which are then manufactured into a battery cell.

What is the downstream stage of battery recycling?

The downstream stage involves the assembly of battery cells into modules and then modules into battery packs, which are used as batteries in EVs. Battery recycling is becoming an important fourth stage, as it reduces dependence on mined critical raw materials and impacts the environment less adversely.

Is the midstream battery supply chain shifting geographically?

The potential for geographical shift in the midstream battery supply chain is greater. In 2022 China accounted for a major share of the processing of key battery materials: about 65% of the world's lithium, 74% of cobalt, 100% of graphite and 42% of copper processing.

How does a battery supply chain work?

Downstream: A battery supply chain needs companies able to assemble the battery module and pack using cells acquired from cell manufacturers. These capabilities can be performed by different actors, including automakers, with assembly often occurring in close proximity to vehicle manufacture.

How do you build an EV battery supply chain?

Building an EV battery supply chain The battery supply chain comprises three stages: upstream, midstream and downstream. The upstream stage in batteries involves the extraction of key raw materials such as lithium, cobalt,

nickel and graphite.

Can the UK play a key role in the battery supply chain?

The UK has a window of opportunity to play a key role in the transition and grow its current battery manufacturing pipeline. Increasing investor understanding of the sector quickly is critical to seize this opportunity. The Battery Supply Chain 4 GUIDE TO INVESTING IN THE EV BATTERY SUPPLY CHAIN

Upstream and downstream of energy storage batteries

Greenhouse Gas Emissions Accounting for Battery ...

Jun 11, 2024 · Many corporate shareholders, other investors, end-users, and others concerned with corporate GHG emissions disclosure would like electric companies to develop corporate ...
