# Use of portable energy storage batteries in China and Europe

#### **Overview**

Which country produces the most EV batteries in the world?

About USD 115 billion - the lion's share - was for EV batteries, with China, Europe and the United States together accounting for over 90% of the total. China dominates the battery supply chain with nearly 85% of global battery cell production capacity and substantial shares in cathode and anode active material production.

What is the EU Battery strategy?

This essay will start by explaining the 4 key components of the EU Battery Strategy: The European Battery Alliance as a forerunner, the EU Batteries Regulation of 2023, a comprehensive framework addressing the lifecycle of batteries from design to disposal, the Raw Materials Strategy, and the Strategic Research and Innovation Agenda.

Can Europe produce a high-value lithium battery?

The dependence on imports of raw materials is a long-established problem (see figure 1), lithium being no exception, as the EU currently accounts for only 0.1% of world production. Prospects for European production of high-value battery components like cathodes, anodes, electrolytes, and separators are even grimmer.

Which country produces the most battery cells in the world?

China dominates the battery supply chain with nearly 85% of global battery cell production capacity and substantial shares in cathode and anode active material production. The extraction and processing of critical minerals is also highly concentrated geographically, with China in the lead in processing the most critical minerals.

What are the key market trends for battery storage?

It covers key market trends, with a particular focus on the shift toward utility-

scale storage, the continuing growth of residential and commercial installations, and the evolving role of battery storage in supporting Europe's clean energy goals.

What is the EU Battery and waste battery Regulation (EU Regulation)?

On August 17, 2023, the EU Battery and Waste Battery Regulation (EU Regulation) officially took effect, setting environmental and resource-based targets for LIBs entering the EU market.
