# Victoria Communication Base Station Power Supply Plant

#### **Overview**

What is Victoria's high voltage transmission network?

Victoria's 6,500 kilometre high voltage transmission network is the backbone of our electricity system It moves electricity from where it is generated to homes and businesses across the state. It powers our houses, our hospitals, our manufacturing and business sectors, and even parts of our transport system.

Where is electricity produced in Victoria?

Electricity generation in Victoria has traditionally been concentrated in the LaTrobe Valley, with large coal-fired power stations and some gas plants supplying the main load centre of Melbourne. Power has also been supplied by the Snowy hydro scheme in the north east, plus two wind farms on the southern coast.

How does Victoria generate electricity?

In Victoria, we currently generate electricity through energy sources like coal, gas, solar, hydro, and wind power. In 2022, 65 per cent of our electricity was produced by coal-fired power stations in the Latrobe Valley. These coal-fired power stations are coming to the end of their economic life and are set to close in the coming decades.

What type of electricity is used in Victoria?

It was designed to connect electricity from coal-fired power generators in the Latrobe Valley to Victorian homes and businesses. Most of Victoria's transmission network is made up of high voltage overhead lines to transmit energy from generators to consumers. The transmission voltages used in Victoria are 220 kV, 330 kV and 500 kV.

How many transmission lines are there in Victoria?

Today Victoria's transmission network is made up of 6,500 kilometres of

overhead lines and 50 terminal stations. Energy sources and generation mix In Victoria, we currently generate electricity through energy sources like coal, gas, solar, hydro, and wind power.

Where should a converter station be located in Victoria?

Marinus Link is investigating the suitability of converter station sites that are close to the existing electricity transmission network in Victoria. The sites are near Driffield and Hazelwood in the Latrobe Valley. More investigations are required before a decision is made about which site is preferred.
