What are the advantages of outdoor base stations

Overview

Why do small outdoor base stations have a better performance than rackmount base stations?

In recent years, technological advances have meant that this base station format has improved its performance in terms of RF power and traffic channels. Thus, by adopting new signal processing techniques such as SDR (Software Defined Radio), small outdoor base stations have been able to match the performance of rack-mount base stations.

What is an outdoor compact base station?

Outdoor compact base stations These base stations are designed for installation in any type of outdoor scenario. They offer a high degree of IP protection, which allows them to operate in the most adverse conditions (rain, extreme heat, wind, humidity, saline environments.) without requiring an additional mechanical cover.

Why should a base station have its own system?

It is also valuable that it includes its own system for the simple management of the base station and its users, so that functions such as adding and deleting groups and terminals, modifying operating parameters in real time, monitoring the status of the unit and displaying alarms in real time, among others, can be carried out.

Why are base stations important for modern telecommunications?

In summary, base stations are critical for modern telecommunications as they serve as the link between mobile devices and the extensive network infrastructure that spans the globe. The strategic deployment and ongoing improvement of these stations are essential for maintaining global connectivity.

How to choose a base station?

Frequency: The base station should operate on a frequency that is compatible with the devices it will be communicating with. Common frequencies include 900 MHz, 1.8GHz, 2.1GHz, 2.4 GHz, 2.6GHz and 5 GHz, etc. 3. Power: The base station should have enough power to provide a strong and reliable signal.

Do base stations need a power supply?

Power supply: The base station requires a power supply to operate. It may be connected to the electrical grid or have a backup power source like batteries or generators in case of power outages. 7. Backhaul connection: The base station needs a backhaul connection to connect to the core network.
