What components does the communication base station EMS include

Overview

Why is communication important in EMS?

Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.

How does EMS radio communication work?

It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz).

What are the components of a base station?

A base station typically consists of the following components: 1. Transceiver: It is the main component of the base station that both transmits and receives signals. It converts the received signals into a format that can be understood by the base station and converts the outgoing signals into a format that can be transmitted over the air. 2.

How does EMS rebroadcast a radio signal?

Some rebroadcast by converting signals to radio and others do so by converting to microwaves. It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band.

What is a base station?

A base station is a radio operated from a fixed site such as a dispatch center, hospital, or some other location. It usually runs off community electrical power and transmits at much higher power than smaller, portable radios. Alternative

power in the form of generators or a set of batteries are usually available.

What frequency does EMS radio communication take place in?

EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz). They are able to follow the shape of the earth allowing communication over long distances. These frequencies are more susceptible to interference from, weather, buildings, and electrical equipment.
