# What do 3s and 2 lithium battery packs mean

#### **Overview**

LiPo batteries come with all kinds of numbers, ratings, and capacities. So, I wanted to take a moment to discuss the differences in 2S and 3S LiPos in simple terms. A 3S LiPo is more powerful than a 2S pack. Full stop. So, higher voltage batteries will have a higher "S" number. However.

There are three numbers you need to understand on a LiPo battery, and they are: 1. Voltage or S 2. Capacity or mAh 3. Discharge or C rating The voltage (S) is a measure of how powerful your battery is. So if your RC car or Plane has an ESC and motor that can.

When you look at any LiPo battery, you will see the letter S on the pack. The S tells you how many cells the pack contains. So, a 3S.

The difference between 2S batteries and 3S batteries is the voltage. Each cell in a LiPo pack provides 3.7 volts. To calculate the voltage of a LiPo pack, multiply 3.7 volts by the number.

The "C" rating on a LiPo battery stands for the discharge rate. What you need to know is the higher the C rating, the better. High C rating.

A 2s battery consists of 2 batteries connected in series. Similarly, 3s means that it is assembled from 3 cells. What is the difference between 2s vs 3s LiPo battery?

Today we take 2s vs 3s lipo battery as an example to illustrate the difference between them. According to a lot of knowledge and testing, 3s provide greater impact, longer run time, and longer life than 2s lipo battery. Below, we explain the principle in detail. See Deal of 2s 3s at Amazon A 2s battery consists of 2 batteries connected in series.

What is the difference between 2s and 3s batteries?

The difference between 2S batteries and 3S batteries is the voltage. Each cell in a LiPo pack provides 3.7 volts. To calculate the voltage of a LiPo pack, multiply 3.7 volts by the number of cells. Again, the number S number tells you the number of cells.

How many volts does a 3s LiPo battery have?

When you look at any LiPo battery, you will see the letter S on the pack. The S tells you how many cells the pack contains. So, a 3S LiPo will have three 3.7 volt cells that are wired in series to produce a voltage of 11.1 volts.

Is a 3s Lipo heavier than a 2s?

To answer this question, you have to factor in battery's capacity into the equation. So a 3S 2200mAh LiPo will be heavier than a similar 2S 2200 mAh pack. So, If your shopping for a battery pack for your RC car, a 3S pack will be heavier than a 2S pack. Is a 2S or 3S LiPo more powerful?

.

Can a 3s battery be charged with a 2s Charger?

Trying to charge a 3S battery with a 2S charger can result in overcharging and potential fire. 1C is a safe charge rate for regular charging. Only use higher charge rates occasionally for fast charging needs. Balance charging is highly recommended for prolonging cell life. Never discharge LiPos below 3V per cell under load to avoid damage.

Should I get a 3s or 2s pack?

If your RC car, boats, plane, drone, or helicopter can run on 3S, it will perform better running the 3S pack than the 2S pack. If you are bashing your RC monster truck, and it can handle a 3S pack, get a 3S LiPo for your truck. If you want the best accelerations and top speed for your RC drone, get a 3S pack instead of a 2S pack.

#### What do 3s and 2 lithium battery packs mean

#### 2s vs 3s Lipo Battery , Comparison Between the ...
