# What is the factory price of energy storage vehicles in Auckland New Zealand

#### **Overview**

What happened to electric cars in New Zealand?

There was a surge of BEV (battery electric vehicle) registrations in the final quarter of 2023 (due to the ending of an incentive scheme). Since then, market share has remained more consistent but has decreased. How many plug-in vehicles are there in New Zealand?

.

Why are EV depreciation rates so high in New Zealand?

Depreciation rates are estimated to be high in New Zealand because of the higher levels of competition in supplies of used vehicles, which include both New Zealand new and imported used vehicles. This is true for EVs as well as other vehicle types.

What is an EV in New Zealand?

NZTA defines an EV as either fully electric (BEV) or plug-in hybrid (PHEV). Both vehicle types can be propelled by externally charged electricity. Both kinds of vehicles have shown significant growth since 2019.

How has the electric vehicle market changed in New Zealand?

Tracking the electric vehicle market in New Zealand. The number of EVs in NZ has grown considerably since 2021. Uptake increase in 2022-2023; the result of a rebate scheme, growing selection of EV models, and favourable pricing for entry-level vehicles. In 2024, EV market share decreased.

Can New Zealand import new EVs?

New vehicles: There will be limits to what can be imported to New Zealand because of limited production capacity, focussed on supplies to more stringent policy-led markets. New vehicles: There are unlikely to be supply constraints for imports of new EVs.

What are the implications for New Zealand's EV supply?

The implications for New Zealand are that there is significant expected investment in EV production capacity and significant increases in sales. New Zealand would expect to increase imports in-line with these global trends. This means that, in the longer run, eg by 2030, there are expected to be no significant limits to EV supply.
