# Which kind of energy storage battery is better for home use

### **Overview**

Are batteries a viable option for home energy storage?

Although deployment of energy storage is on a steady climb, attachment rates of batteries remain low. In 2020, just 8.1% of residential solar systems included attached batteries, according to Lawrence Berkeley National Laboratory (LBL). Many options exist with multiple battery chemistries available for home energy storage.

Which battery chemistries are best for home energy storage?

Many options exist with multiple battery chemistries available for home energy storage. The bottom line, however, is that in the United States, two brands dominate the space. More than 90% of the market is served by LG Chem and Tesla Powerwall, which are lithium-ion batteries, according to LBL. Tesla controls more than 60% of the entire market.

What is the best home battery storage?

Because home battery storage has something to offer everyone—from backup power to bill savings to self-reliance. With this in mind, there is no single "best" battery. There are different solutions to meet the varying requirements and needs of homeowners across the country.

What makes a good battery?

The next thing to consider is the composition of the battery. Every battery on our list is either lithium-ion or lithium iron phosphate (LFP). While similar, the differences are noteworthy. LFP batteries typically have longer lifespans and increased thermal stability (aka less heat and fire risk).

Which inverter is best for home battery storage?

The leading inverter company, not surprisingly, offers a fantastic home battery storage solution in the Enphase IQ Battery 5P. This smaller capacity battery comes in at a lower price point than larger capacity competitors, and

can often get the job done in Time-of-Use shifting applications for bill savings.

Can solar power be stored in a battery?

Existing solar systems typically have solar inverters, which change the DC power produced by panels to AC power that can be consumed in your home or exported onto the grid. But if you want to store that AC power in a battery, it needs to be inverted again to DC power.
