Why does base station communication equipment have DC

Overview

Why should telecommunication equipment manufacturers adopt a common power standard?

By adopting a common power standard, telecommunication equipment manufacturers can design and produce devices that are compatible with a wide range of networks worldwide. The -48 volt DC standard enables interoperability and simplifies the deployment and management of telecommunication systems.

What are the applications of -48V DC telecommunications equipment?

Telecommunications equipment draws a lot of current and all of the wires and conductors are very large. Other applications for -48V DC include powering cell towers, local cable TV vaults, and legacy central offices of the various incumbent local exchange carriers (ILECS). Many of these ILECS have been bought back by AT&T.

What is a 3G base station converter?

In a 3G Base Station application, two converters are used to provide the +27V distribution bus voltage during normal conditions and power outages.
