# Wind solar and storage new energy sector

#### **Overview**

Global renewable capacity is set to continue with robust growth in 2025, with forecasts pointing to more than 500 GW of new solar installations, 130 GW of new wind capacity, and over 50 GW of new battery storage. Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

What solar projects are coming to the power grid in 2025?

This year, massive solar farms, offshore wind turbines, and grid-scale energy storage systems will join the power grid. Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity. The Oasis de Atacama in Chile will be the world's largest storage-plus-solar project.

Are solar and wind energy sources liable to intermittency & instability?

Electrochemical and other energy storage technologies have grown rapidly in China Global wind and solar power are projected to account for 72% of renewable energy generation by 2050, nearly doubling their 2020 share. However, renewable energy sources, such as wind and solar, are liable to intermittency and instability.

How do new energy sources affect storage capacity?

Breakthroughs in solid-state, sodium-ion, and advanced lithium-ion batteries significantly boost storage capacity. New energy sources are also emerging, broadening the scope of renewable energy. In addition to solar and wind, alternative power sources are playing an increasingly important role.

Is the wind sector poised for a recovery?

And despite ongoing challenges, the wind sector is also poised for a recovery, with the rate of expansion doubling between 2024 and 2030, compared with the period between 2017 and 2023. Already, wind and solar PV are the cheapest options to add new electricity generation in almost every country.

How will wind & solar payments work in 2025?

New policy introduced in February 2025 requires wind and solar payment mechanisms to move toward more market-based structures, where 100% of wind and solar generation is to be traded in the wholesale market with local governments left to define their own implementation details by the end of the year.
